Report

No.: 1204-T-43502
Date of arrival: 20-04-2012
Date of report: 23-04-2012

patient identification:	Dog	Schäferhund	
	unknown		* 01.02.09
date sample was taken:	17-04-2012		
owner / animal ID:	Johansen, Annette		
type of sample:	tissue		

parameter	value	reference value
-----------	-------	-----------------

Macroscopic findings:

Submitted was tissue 4,0x1,7x1,0 cm with one 1,5x1,0x1,0 cm nodule.
Three sites were embedded.

Microscopic findings:

The following staining was performed according to standard operation procedures: H&E.

Well differentiated tumor growth of hair follicles was seen. All layers of the follicular wall were included and there was central cornification.

The margins are clean.

Diagnosis:

- cystic trichoepithelioma — *Good report goodst Fea H&E/F&K*

Critical report:

A trichoepithelioma is a benign tumor deriving from all three segments of the hair follicle. The back is the most common location. The prognosis is good.
